EUDERMIQUE

treatment line plant stem cells

fights hair loss

Plant stem cells are primitive cells not specialized are able to reproduce and develop potentially indefinitely, transforming in several other cell types more specific, able to perform any type of function and capable of repairing any type of tissue. These cells are of epigenetic factors similar to human cells that allow you to nourish, tone and revitalize the scalp and the cellular structure of the hair.

restructuring properties of plant stem cells make it possible to prolong the life of the hair follicle and thus slow down the process of hair loss. Through particular processes of culture in the laboratory, were obtained of plant stem cells from a selection of unripe berries of grapes. These, in fact, than ripe grapes have more vitality extremely high and therefore a greater potential for growth. Plant stem cells, derived from the unripe berries of grapes, favoring an important antioxidant action and are a great help to counteract the harmful radical species that caused by endogenous factors (stress, smoking, poor diet,...) and exogenous (pollution, UV radiation,...). Their effectiveness is maintained within the cosmetic formulations giving a proven anti-aging.

ARNICA SHAMPOO - salt-free, SLS and SLES

The presence of Arginine, fortifying and restructuring properties, helps to rebuild damaged hair and brittle. Moreover, the presence of natural extracts of Ginger, Nutmeg and Clove helps to carry out a tonic and stimulant, increasing the peripheral microcirculation in the scalp and improving the oxygenation of the hair.
