FLY X2 professional trimmer

FLY X2 is inspired by the quality and performance of Ferrari, as well as the technological excellence of BaBylissPRO. This luxury professional hair clipper is equipped with an engine technology MaxLife PRO exceptional performance, and ultra-fast system with an exclusive cut. The motors are equipped with traditional carbon whose contact wear ends up affecting the life of the appliance. Once the coals consumed, the engine stops working. BaBylissPRO™ has eliminated the coals and replaced them with 4 very powerful rare earth magnets. This technological advancement allows you to design engines lighter and more durable (up to 10,000 hours). MaxLife PRO engines are much lighter than standard motors and are equipped with 2 ball bearings that greatly reduce the level of vibration.

The blade

X - Grip is a fixed blade with Titanium coating, a movable knife steel with a high content of carbon, which offers cutting efficacy two times greater from the first step, a cutoff frequency of 6,300 movements per minute blade.

FLY X2 also offers 32 possible combinations of cutting heights.

battery Lithium-Polymer high capacity allows the engine to operate with a force constant high power and torque, ensuring maximum performance, also guaranteeing exceptional autonomy of 3 hours of operation (without connection to the mains and without recharge) obtained with an initial time of ultrafast charge 3 hours

FLY X2 thus guarantees savings, comfort, lightness and ergonomics.
